# January 2018 Air Quality Summary Report

## Barangaroo South – Remediation Works

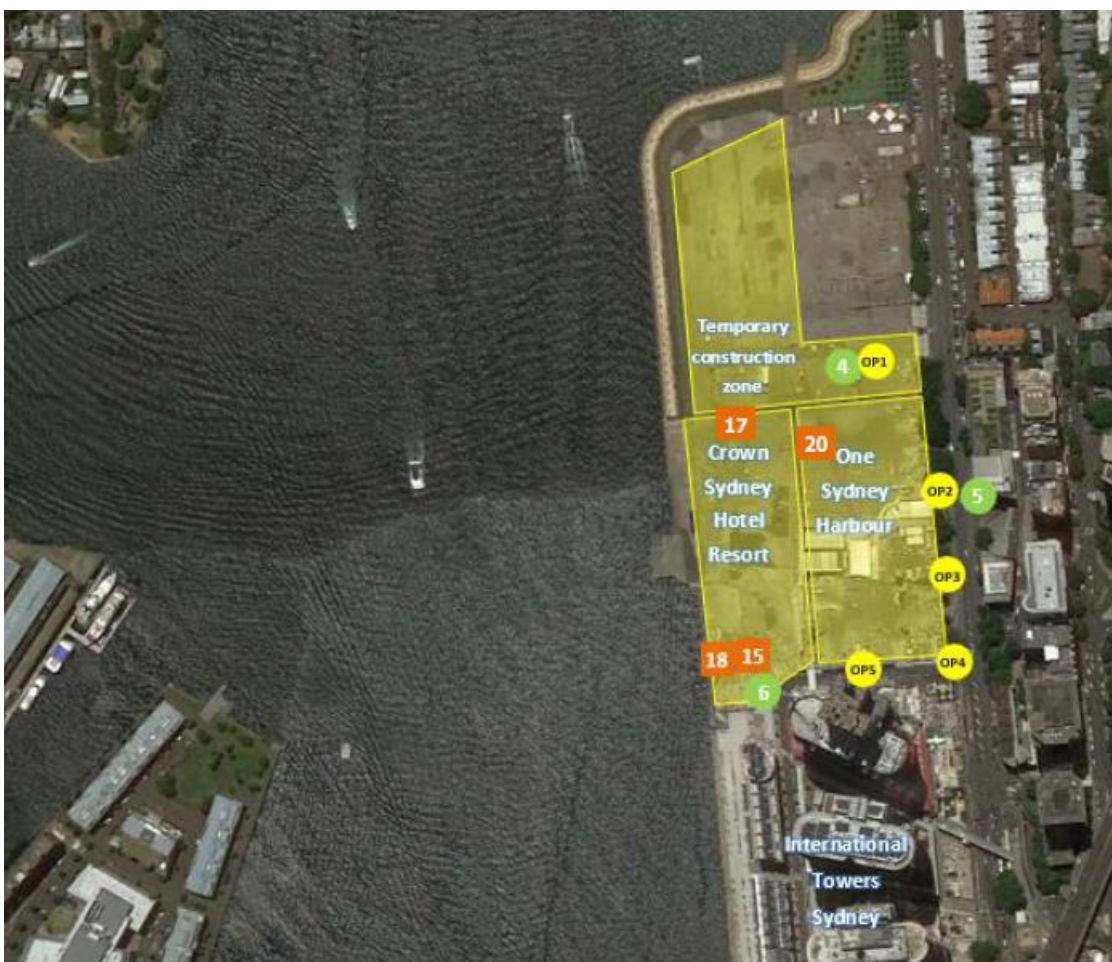

This report has been compiled to summarise results of air quality monitoring at Barangaroo South in January 2018 in accordance with [EPL number 13336](#). This data is for samples taken from 1 to 31 January 2018. The data was provided to the Barangaroo Delivery Authority (the Licencee) on 19 February 2018.

Lend Lease conducts continuous air quality monitoring at Barangaroo South to measure air quality and assist the construction team implement appropriate environmental controls on site.

Air quality monitoring is carried out in accordance with all relevant authority and statutory requirements. Monitoring parameters include particulate matter less than 10 microns (PM10), total solid particles (TSP), metals, polycyclic aromatic hydrocarbons (PAHs) and volatile organic compounds (VOCs).

## Air quality monitoring locations

Air quality monitoring locations are located as shown below:

Approximate location of air monitoring equipment

### Legend

-  Ambient Air Quality Monitoring – EPL Point
-  Ambient Odour Monitoring Point
-  Air Discharge Point – EPL Point

## Monitoring results – Interim Water Treatment Plant

During January 2018, the Water Storage Balance Tanks (WSBTs) fed untreated surface and groundwater water from the OSH remediation works to the Interim Water Treatment Plant (IWTP) for treatment. The water was treated and discharged in accordance with the premises EPL No. 13336. The air from the WSBTs and the IWTP is cleaned through filter media and discharged via vents. These vents are monitored in accordance with EPL requirements. During January, there were three air discharge points (EPL Point 15, 17, & 18) that were monitored in accordance with the EPL (continuously during operation). There were no exceedances of the VOC data associated with the WSBTs (EPL Point 17) or the Interim WTP (EPL Points 15 & 18) for this month.

### Volatile Organic Compounds (VOCs) – Interim Water Treatment Plant

Monitoring Parameter	EPL Point 15 1 hour average	EPL Point 17 1 hour average	EPL Point 18 1 hour average
Average (mg/m <sup>3</sup> )	1.04	0.0	0.03
Minimum (mg/m <sup>3</sup> )	0.0	0.0	0.0
Maximum (mg/m <sup>3</sup> )	4.8	0.1	0.2
Limit	5 mg/m <sup>3</sup>	10 mg/m <sup>3</sup>	5 mg/m <sup>3</sup>

## Monitoring results – Hotspot Remediation

During January 2018, the remediation of the “hotspot” areas was completed within an Odour Control Enclosure (OCE). The air captured within the OCE was treated and discharged in accordance with the premises EPL No. 13336. The air from the Hotspot OCE is cleaned through filter media and discharged via a vent. This vent (EPL Point 20) is monitored in accordance with EPL requirements (i.e. continuously during operation). There were no exceedances of the VOC data associated with the EPL Point 20 for this month.

Monitoring Parameter	EPL Point 20 - 1 hour average
Average (mg/m <sup>3</sup> )	0.00
Minimum (mg/m <sup>3</sup> )	0.00
Maximum (mg/m <sup>3</sup> )	0.04
Limit	5 mg/m <sup>3</sup>

In addition to the continuous VOC monitoring, a stack test is required for EPL Point 20 once post commissioning and then every two months thereafter during operation. There was no stack monitoring undertaken for January 2018.

## Monitoring results – Ambient air quality

Monitoring at ambient locations around the construction site was undertaken as per the EPL 13336.

These locations correspond to the following licenced monitoring locations, as shown in the figure above:

- ) Northern: EPL Point 4
- ) Eastern: EPL Point 5
- ) Southern: EPL Point 6

### PM10
