# April 2018 Air Quality Summary Report

## Barangaroo South – Remediation Works

This report has been compiled to summarise results of air quality monitoring at Barangaroo South in April 2018 in accordance with [EPL number 13336](#). This data is for samples taken from 1 to 30 April 2018. The data was provided to the Barangaroo Delivery Authority (the Licencee) on 20 May 2018.

Lend Lease conducts continuous air quality monitoring at Barangaroo South to measure air quality and assist the construction team implement appropriate environmental controls on site.

Air quality monitoring is carried out in accordance with all relevant authority and statutory requirements. Monitoring parameters include particulate matter less than 10 microns (PM10), total solid particles (TSP), metals, polycyclic aromatic hydrocarbons (PAHs) and volatile organic compounds (VOCs).

## Air quality monitoring locations

Air quality monitoring locations are located as shown below:

*Approximate location of air monitoring equipment*

### Legend

-  Ambient Air Quality Monitoring – EPL Point
-  Ambient Odour Monitoring Point
-  Air Discharge Point – EPL Point

## Hickson Road Remediation VOCs

The Hickson Road remediation works have commenced. The Hickson Road remediation includes the use of an Odour Control Enclosure (OCE) and Emissions Control System (ECS) to manage the air quality associated with the works. The air from within the OCE is captured and treated, using granular activated carbon (GAC) before the treated air is discharged in accordance with the premises EPL No. 13336 from EPL Point 19. VOC (as n-propane equivalent) is measured on a continuous basis using a Flame Ionising Detector (FID). The VOC data for this month has been summarised below.

## Monitoring results – Block 4 & 5 Remediation

The Block 4 & 5 remediation works have commenced. Like the Hickson Road remediation, the Block 4 & 5 includes the use of an OCE and ECS. The air from within the OCE is captured and treated using GAC before the being discharged in accordance with the premises EPL No. 13336 from EPL Point 20. VOC (as n-propane equivalent) is measured on a continuous basis using a Photoionisation Detection Unit (PID). The VOC data for this month has been summarised below.

## Monitoring results – Interim Water Treatment Plant

During April 2018, the Water Storage Balance Tanks (WSBTs) fed untreated surface and groundwater water from the OSH remediation works to the Interim Water Treatment Plant (IWTP) for treatment. The water was treated and discharged in accordance with the premises EPL No. 13336. The air from the WSBTs and the IWTP is cleaned through filter media and discharged via vents. These vents are monitored in accordance with EPL requirements. During April, there were three air discharges points (EPL Point 15, 17, & 18) that were monitored in accordance with the EPL (continuously during operation). There were no exceedances of the VOC data associated with the WSBTs (EPL Point 17) or the Interim WTP (EPL Points 15 & 18) for this month.

## Monitoring results – Ambient air quality

Monitoring at ambient locations around the construction site was undertaken as per the EPL 13336.

These locations correspond to the following licenced monitoring locations, as shown in the figure above:

- Northern: EPL Point 4
- Eastern: EPL Point 5
- Southern: EPL Point 6
