October 2019 Air Quality Summary Report

Barangaroo South – Remediation Works

This report has been compiled to summarise results of air quality monitoring at Barangaroo South in October 2019 in accordance with [EPL number 13336](#), noting that the EPL was surrendered on 17 October 2019. This data is for samples taken from 1 to 31 October 2019, except for the WTP which collected data till 17 October 2019. The data was provided to the Barangaroo Delivery Authority (the Licencee) on 20 November 2019.

Lend Lease conducts continuous air quality monitoring at Barangaroo South to measure air quality and assist the construction team implement appropriate environmental controls on site.

Air quality monitoring is carried out in accordance with all relevant authority and statutory requirements. Monitoring parameters include particulate matter less than 10 microns (PM10), total solid particles (TSP), metals, polycyclic aromatic hydrocarbons (PAHs) and volatile organic compounds (VOCs).

Air quality monitoring locations

Air quality monitoring locations are located as shown below:

Approximate location of air monitoring equipment

Legend

-  Ambient Air Quality Monitoring – EPL Point
-  Ambient Odour Monitoring Point
-  Enclosure Discharge Point – EPL Point

Environment Protection Licence number: 13336

Licencee: Infrastructure NSW, Level 27, AON/Maritime Trade Towers, 201 Kent Street, Sydney, 2000

These results have been made available in accordance with Environment Protection Authority requirements for publishing pollution monitoring data

Hickson Road Remediation VOCs

The Hickson Road remediation works were completed at the end of August. There is no VOC data for this month.

Monitoring results – Block 4 & 5 Remediation

It should be noted that EPL point 20 ceased operation on 10 January 2019.

Monitoring results – Main Water Treatment Plant

During October 2019, the Water Storage Balance Tanks (WSBTs) fed untreated surface and groundwater water from the OSH remediation works to the Main Water Treatment Plant (MWTP) for treatment. The water was treated and discharged in accordance with the premises EPL No. 13336. The air from the WSBTs and the MWTP is cleaned through filter media and discharged via vents. These vents are monitored in accordance with EPL requirements. During October, there were two air discharge points (EPL Point 16, 17) that were monitored in accordance with the EPL (continuously during operation). The data for EPL Points 16 and 17 were collected until 17 October 2019 when the EPL was surrendered.

There were no exceedances of the VOC data associated with the WSBTs (EPL Point 17) or the MWTP (EPL Point 16).

Monitoring results – Ambient air quality

Monitoring at ambient locations around the construction site was undertaken as per the EPL 13336.

These locations correspond to the following licenced monitoring locations, as shown in the figure above:

- Northern: EPL Point 4
- Eastern: EPL Point 5
- Southern: EPL Point 6
